

Facility Tours

The Association of Equipment Manufacturers (AEM) offers elected officials the opportunity to tour manufacturing facilities. It is an opportunity to see firsthand the vital role that equipment manufacturing plays in each community, big or small, throughout the country.

Each tour provides the opportunity to connect directly with the 2.8 million men and women of the industry and learn how cutting-edge technologies and a traditional strong work ethic are helping equipment manufacturers solve tomorrow's challenges today. It also highlights the diverse manufacturing job opportunities and how the equipment manufacturing industry is working to create more family-sustaining jobs over the next decade.

The 2.8 million men and women of the equipment manufacturing industry make the equipment that builds, powers, and feeds the world and positively impacts the lives of every American.

While a combine harvester cutting corn or an excavator digging a trench is a common sight for many Americans, they may not realize what that equipment means to the hard-working Americans who build it and the impact the equipment manufacturing industry has on communities across America. Whether it is the welder controlling a robotic welding machine or the software engineer designing the controls for a new wheel loader, there are millions of jobs and opportunities created by the equipment manufacturing industry.

To request more information or to schedule a facility tour, please contact AEM's Advocacy Team at AEMWash@aem.org.

AEM is the North American-based international trade association representing off-road equipment manufacturers and suppliers, with more than 1,000 companies and more than 200 product lines in the agriculture and construction-related industry sectors.
